

The HIX® "Snap" Wrap is the best mug wrap available in the market today. No other mug wrap is as easy to apply or remove. Its advantage is its patented tool-less clamping technology. There's no fumbling with awkward closing mechanisms or wrenches. There's no need for an extra set of hands when making adjustments while closing like there is with other brand wraps.

The HIX "Snap" Wrap's unique locking mechanism opens and closes with a simple "snap". It securely closes the wrap while the high-density silicone rubber provides the pressure needed on the artwork and substrate. The substrate, artwork, and wrap are then ready to be sublimated in a HIX® SubliPro® conveyor or countertop (CT) batch oven.

SubliPro®

The HIX® SubliPro® conveyor ovens are specially designed for high-volume sublimation printing. For production of 100 to over 1,000 mugs per hour, the HIX SubliPro Oven is the perfect choice. As the only oven of its kind in the industry today, this oven can cure sublimation on a variety of substrates whether they be wide, narrow, white, black, a multitude of different colors, and up to 8.5" tall. This includes an ever-growing variety of sizes and shapes such as dog and cat bowls, latte mugs, glasses, bottles, beer steins, and shot glasses, etc.

With specifically engineered and positioned heaters, and an advanced, highly efficient recirculating air flow system HIX has been able to reduce the temperature variation in the oven chamber to within 10°F of the set process temperature. This will satisfy the curing requirements of even the most demanding and unforgiving substrates. The accurate temperature profile, the large door openings, the advanced cooling system located at the exit end of the conveyor, and the durable Stainless Steel conveyor belt give you the best sublimation oven available on the market today.
